

Get your pool in shape for summer!

Environex
liquid pool
chlorine 15L
\$22

Now that the days are getting warmer, its time to get outside and get the pool up and running again. Things that you need to be checking are:

1. Scoop out all the built up leaves and rubbish. This will foul up skimmers, pumps and filters.
 2. Check over the pump, filter and chlorinator to make sure they are all working properly and are not leaking. If there are any strange noises or things don't look right, then get them checked early so they don't become an expensive problem later.
 3. Have the water tested, especially focus on getting the salt, pH and stabilizer all at the right levels so chlorine will be produced and will do its job.
- Southern's now provide **free pool water testing in store** and have the expertise to tell you what you need from the Environex (Klen Chemicals) pool chemicals range. As the Davey service agent for Bunbury, we can have you chlorinator or pool pump back in super working order in no time at all.

Steelfab and Southern's, providing you with the right tank solution

Southern's can announce that we are the South West agent and installer for Steelfab water tanks.

A WA owned family business, Steelfab's steel liner tanks are locally designed and manufactured in Mundaring. They have an excellent build quality and are generally manufactured from Colourbond steel with potable water grade liners made from Dupont Elvaloy.

The Aquadome range of tanks range in size from 9,000L up to 250,000L and come standard with an inspection hatch, ladder and whirlybird. They are backed by a conditional 25 year guarantee to give you peace of mind.

Southern's can provide you with the complete service for getting that new water tank installed. We can provide the site works and sand pad, the installation, through to installing your new house pump and a filtration system to keep your family safe.

We also now offer a **water tank cleaning service** to our customers. We come to site and vacuum out the built up organic sludge in the bottom of your tank. This lowers the total microbes in your tank making the water easier
